

Now & Future :

In 2030, I think it will as modern as movie "Ghost in the shell" or "Ready Player One". All the things like advertisements and signboards or news gonna be projected between building and building.

Although it replace old one which made from paper and more wasted. In the picture, I thought the most important change is in the "stairs". In the future the stairs will be smooth and people can go where they want by floated from high-techinc stairs. Not only it is more convenient and comfortable for people but also it is more friendly for disable and old people.

In my opinion, all the change nomatter what it is, they always from humanity. But in the future may ended up losing more and more Taiwanese culture.
