

Illustration and Writing Contest- Now and Future: 2020 &.2030

Will AI make our life better ?

In my opinion, the most obvious difference between 2020'and 2030'is the human touch.

With the development of AI technology, more and more jobs will be replaced by robots, such as engineer, driver, nurse, waiter and so on. This will result in many people lose their jobs, therefore enlarge the social and economic gap between the rich and the poor. Moreover, people more likely interact with and trust machines.

In order to illustrate these differences I draw two pictures with contrast tunes:the left is colorful, bright and warm, on the contray, the right is dull, boring and cold.

I'm so worried that we will lose more and more human touch, that is we will likely live an unhappy life.
