

Illustration and Writing Contest- Now and Future: 2020 vs. 2030

A thick, expressive green brushstroke in the top-left corner of the page, with a white highlight in the center, suggesting a wave or a splash of paint.

In 2020, the sky we see is still blue. The river flows with fish. Colorful corals are still living underwater. Polar bears run on the Arctic ice. People say “it’s good weather today”

In 2030, the air pollution will be worsened. The sky is dark without clean air. Trees will be gone because of deforestation. The climate will change to be drier. Corals will be white because they will die in polluted ocean. Polar bear will probably extinct if the global warming becomes worse. More and more typhoons will bring heavy rain to flood. Nothing will be life if people don’t care about nature now.
